

**ANDY ASKS NIMOY AND SHATNER
TO AFFIRM HIS TRUTH CAMPAIGN**

Andrew D. Basiago

Leonard Nimoy

Dear Sir,

I am an emerging figure in the Truth Movement. I discussed my true experiences in time travel as a child participant in DARPA's Project Pegasus during an historic disclosure event on radio's Coast to Coast AM on 11/11/09, which is available at my website www.projectpegasus.net. I would like to invite you and William Shatner to consult with me in person, question me at length about my claim that during the period 1968 to 1972 I teleported in Project Pegasus, and consider making a joint statement in which you would affirm my truth campaign and call for declassification by the US government of its secret teleportation capability. In the past, because of the depiction of teleportation on STAR TREK, Mr. Shatner has been used to perpetuate the US government's time travel cover-up. For example, during an NBC Nightly News broadcast about teleportation in 2006, he was featured joking about the notion that should teleportation emerge in the future, this would make it easier for him to travel from his home to his office in Los Angeles. I am happy to inform you that Tesla teleportation, which propagates "vortal tunnels" in the time-space continuum through which the teleportee leaps, emerged in 1967-68, not long after STAR TREK premiered on American television portraying an entirely opposite form of teleportation. In fact, the US government's time-space exploration program, involving different forms of quantum access and administered by Dr. Harold M. Agnew, the director of LANL, was so advanced during that time period that by 1969, DARPA was training a cadre of American schoolchildren to become America's first generation of "chrononauts." I was one of those children, and as such, not just a child of STAR TREK, but one of America's early time-space explorers. The truth campaign that I am currently waging is based on actual, lived experiences that I had in secret time-space research by the US defense-technical community. It is focused upon urging the US government to declassify teleportation so that this revolutionary technology, which has been kept secret for over 40 years, can now be used to help humanity achieve planetary sustainability in the 21st century. In love and admiration for you and Mr. Shatner and the many brilliant performances that you have privileged us with during your long and illustrious careers, I ask that you endorse my truth campaign so that human civilization on Earth not only survives but thrives in the 21st century, and so that the dream of an interplanetary society as depicted on STAR TREK might "live long and prosper"!

Your friend in time-space,

Andy
