

**ANDY WRITES LINDA MOULTON HOWE REVEALING THAT DOTY CASE WAS DISINFORMATION TARGETING FACTS SURROUNDING PEGASUS**

**Andrew D. Basiago**

**Linda M. Howe**

Linda, I've always enjoyed and admired your reporting on Coast. As you may know, I told the story of my experiences as a child participant in DARPA's Project Pegasus on Coast on 11/11/09. I want you to know that your encounter with Richard Doty in 1989 was, without question, an attempt by the US government to take major information connected to Project Pegasus and spin it as leaked disinformation by Doty, thereby attributing falsity to true facts. The factual connections between Richard Doty's claims and Project Pegasus included alien liaison in New Mexico, "the Yellow Book," chronovision/Looking Glass technology, Sandia (where the teleport in NM was/presumably still is located), holographic images of the Crucifixion of Jesus, etc. Project Pegasus retrieved my future book about Project Pegasus from the future and was in possession of it as early as 1971. I think Doty's attempt to manipulate you was an effort to plant elements from my book in the Ufological domain so that they could later be used to discredit my telling of what Project Pegasus encompassed. If you still have your notes from your encounter with Doty in 1989, I think it might be constructive for us to consult by phone. I can put all of the facts of the Doty case in their proper historical context, which is to say that I can explain for you how all of the substantial memes that Doty was providing you were Project Pegasus-related. Please know that I am not grandstanding (as Kerry Cassidy thinks), purporting false data (as Michael Salla has alleged) or spreading disinformation for the intelligence agencies (as Richard Hoagland has accused me of doing). I am simply telling the truth as I understand it. At this time in my career, I have only two major goals. One goal is to share my experiences in Project Pegasus, so that the true history of the emergence of time-space exploration by the US government is told, and that a factual basis might then exist to urge the US government to declassify teleportation, so that teleportation might then be used to advantage humanity in the 21st century. My other goal is to continue to identify life forms and ancient artifacts in NASA's photographs from Mars, so that I can make the case that Mars is inhabited so that the ecology and civilization of Mars might then be protected from visitation, exploration, habitation and colonization by human beings from Earth. I have no interest at this time in immersing myself in public discourse about extraterrestrial life, beyond Mars. As a fellow writer, however, I would be happy to put the Doty case into proper historical perspective for you. It was not disinformation but rather information crafted to appear as disinformation, which, in the final analysis, is a higher form of disinformation. Sincerely, Andy
